

CPUcoin Partners with QoinPro to Expand Their Sharing Economy for CPU/GPU Power

[CommPRO](#) Editorial Staff

CPUcoin developers of the sharing economy for CPU power, [announced](#) a partnership with QoinPro, the multi-wallet provider of AirDrop services and auto-earning technology. The companies have created a partnership to accelerate CPUcoin's DService (Decentralized Server Application) platform and conduct an airdrop of approximately \$400,000 worth of CPUcoin. In the future, QoinPro's 2 million wallet holders will also be invited to "one-click" purchase CPUcoins with cryptocurrencies they already own, and install CPUcoin's DService platform to become a miner in the cutting-edge service that lets users earn money with their unused CPU/GPU power.

CPUcoin pulls together unused cloud resources and restructures them into a vast, scalable network of highly available compute resources. Initially, QoinPro users will receive airdrop tokens for achieving certain goals to promote the CPUcoin platform. Eventually the goal is to provide new and exciting ways for QoinPro's customers to earn CPUcoin by installing the miner on their machines to provide compute resources for DServices.

In addition, QoinPro's Founder and Managing Director Wouter S. van der Schagt has joined CPUcoin's advisory board. Mr. Van der Schagt brings with him over 20 years of professional, development, architectural and entrepreneurial experience and has been in the blockchain space since early 2011. He's also a Founder and Managing Director of PlannerScape.

"QoinPro has reviewed the CPUcoin project and architecture and believes this to be the perfect match with QoinPro's goals to

provide real value to our wallet holders both in terms of unique token offerings, and new ways to earn cryptocurrency,” said Wouter van der Schagt, CEO of QoinPro. “After reviewing all the decentralized computing projects and meeting with the team at CPUcoin, we believe this to be the best CPU blockchain project for providing greater earning potential to our existing and future customer base.”

“The partnership with QoinPro is a big step forward for CPUcoin as it will help secure a vast network of miners while enabling every current QoinPro user to convert and purchase directly into our anticipated CPUcoin IEO with the click of a button,” said Sean Barger, Managing Director of CPUcoin. “We look forward to working with the team at QoinPro to provide new ways of accelerating crypto earnings.”
