

# Sheesha Finance Partners with deFIRE to Offer Optimal Execution Across Decentralized Exchanges

*CommPRO Editorial Staff*

Sheesha Finance, the decentralized cryptocurrency mutual fund for DeFi investors to access a variety of projects without having to spend time doing research, and deFIRE, a DeFi platform designed for the Cardano ecosystem, announced a partnership to deliver valuable crypto solutions to Cardano's community and users. The partnership will focus on providing investors with promising DeFi project access as well as optimal execution for token swaps and order routing services on decentralized exchanges (DEXs).

DEXs are becoming increasingly popular for crypto users but between fees, liquidity pools and pricing, users have to estimate which swap will deliver the best value. Providing a solution to this costly challenge, deFIRE offers a DEX aggregator where users can always achieve the best price for their token swap. It is the first of its kind within the Cardano ecosystem. Sheesha Finance supports innovative DeFi projects, such as deFIRE, and rewards investors of any size, from small to large ticket holders, with unlimited DeFi tokens from a diversified portfolio of projects.

"As DeFi continues to explode, it is important to have fair tools and resources available," said Saeed Hareb Al Darmaki, founder of Sheesha Finance. "By partnering with quality projects like deFIRE that put the user interest at the forefront, Sheesha is supporting an interconnected thriving ecosystem with integrity."

“We are excited to partner with Sheesha Finance and be part of their DeFi project roster,” said Mark Berger, President of the Occam Association, incubating deFIRE. “deFIRE will fulfill a critical role within the Cardano ecosystem by providing a DEX order router for the rapidly growing native token environment. Through our deep links with the blockchain industry, such as Changelly.com and Occam.fi, and this new partnership with Sheesha Finance, deFIRE is poised for success both during the IDO phase and beyond.”

deFIRE has created a low latency, decentralized order router, offering its services to the growing network of Cardano ecosystem-oriented institutional order flow originators and retail traders. deFIRE connects to the deepest pools of on-chain liquidity and has also built its own. Incubated and supported by Occam.fi, the first decentralized launchpad designed for the Cardano ecosystem, and powered by Changelly, the industry leader in cross-chain liquidity provision and trade settlement services since 2015, deFIRE has a vast network of support and domain expertise. deFIRE has been audited by both Scalable Solutions, and market-leading blockchain security firm, CertiK. The audits identified no major bugs, with only minor recommendations made. These recommendations are already being implemented. The audits will soon be available for the public via Occam.fi’s website.
